

ADD secures ISO/IEC 27001:2022 certification for the second consecutive year, reaffirming international data security standards

ADD continues to achieve ISO/IEC 27001:2022 certification for the second year in a row, underscoring its strong commitment to data protection and information security.

Mr. Sompoch Tanutantivong, Chief Financial Officer of AddTech Hub Public Company Limited (ADD), a provider of digital content and digital solutions, disclosed that the Company has received ISO/IEC 27001:2022 Information Security Management System (ISMS) certification, an international standard for information security management, from BSI Group (Thailand) Company Limited for the second consecutive year. This achievement reflects the company's strong commitment to information security, particularly its emphasis on effective prevention and management of information security-related risks, while supporting sustainable organizational development in an evolving environment. The certification helps build confidence among both internal and external stakeholders.

Receiving this certification not only reaffirms ADD's dedication to strengthening its security infrastructure and data governance, but also demonstrates its rigorous and prudent management approach in line with international best practices. This enables the Company to adapt to digital-era changes and reinforces trust among customers, business partners, and all stakeholders contributing positively to the organization and supporting its long-term, stable, and sustainable leadership position in information technology sectors.
